Geraci CRM — Marketing Quick Guide

Updated 2026-04-28 · The shortcuts and flows you'll use every day

Get there fast

Where	Shortcut	Or in the drawer
Email Campaigns	`g 1`	Marketing → Email Campaigns
Marketing Campaigns	`g 2`	Marketing → Marketing Campaigns
Sequences	`g 3`	Marketing → Sequences
Forms	`g 4`	Marketing → Forms
Analytics	`g 5`	Marketing → Analytics
Audiences (People)	`g 6`	Marketing → Audiences
Landing Pages	`g 7`	Marketing → Landing Pages
Anywhere — Quick Switcher	`⌘ K · Ctrl K`	Works on every page
Settings	`⌘ ,`	Other → Settings

Daily workflow shortcuts

SIDEBAR (ANY MARKETING ROUTE)

`/`	Focus filter
`?`	Show shortcut help
`[`	Collapse sidebar
`c`	Create new record
`p`	Pin / unpin current
`y`	Copy current link
`m`	Go to Analytics
`j / k`	Next / prev section

PINNED RECORDS

`1 – 9`	Jump to pinned position
`n / b`	Walk next / previous
`drag ⠿`	Reorder
`double-click`	Rename in sidebar
`right-click`	Move to top / Unpin

FILTER (WHEN FOCUSED)

↑ ↓	Walk highlighted result
↵	Open highlighted
`Tab`	Move into result list
`Esc`	Clear / unfocus (2 stages)
`2+ chars`	Search across other sections

QUICK SWITCHER (CMD+K)

↑ ↓ · `PgUp` `PgDn`	Walk results
`Tab` / ⇧ `Tab`	Next / prev group
↵	Open
⇧ ↵	Open in new tab
⌘ `P`	Pin highlighted
+	New record (on Section)
⌘ `Backspace`	Clear input
⌘ `1` – `6`	Direct section jump

Five-minute task recipes

SEND A ONE-OFF EMAIL

1. `g 1` · `c` · type name · ↵
2. Set Subject + From in the right rail
3. Build the body in the Email Builder tab — drag modules, set tokens like `{{contact.firstName}}`
4. Add recipients · click **Send test** · review
5. **Send now** or set Scheduled Date

BUILD A 3-STEP NURTURE SEQUENCE

1. `g 3` · `c` · name it · ↵
2. Cadence tab → add Email step → wait 3 days → email step → wait 5 days → email step
3. Set Entry trigger (form submission / list)
4. Status → **Active** after testing on a small list

CAPTURE LEADS WITH A FORM

1. `g 4` · `c` · name it · ↵
2. Add fields — Type dropdown has 16 options: text, long text, number, boolean, rating, date, date+time, email, phone, URL, address, full name, file, select, multi-select, record
3. Toggle *Auto-create person*; optionally set *Tags to apply on submission* (segments contacts by which form they used)
4. **Publish** · copy the embed iframe — or POST your own form to `/forms/<workspace-id>/<form-id>/submit` (CORS open, no auth)

STOP BOTS WITHOUT SIGNING UP FOR ANYTHING

Six bot-protection layers in form Settings tab. Five are native (zero accounts, zero API keys); only Turnstile is a third-party service. Recommended baseline:

1. *Honeypot field name*: `company_url` — then add an off-screen `<input name="company_url" tabindex="-1" style="position:absolute;left:-9999px">` to your form. Bots fill it; humans don't.
2. *Require form-load token* on with *Minimum submit time* 2 — defeats direct-POST scrapers + instant-fire replays
3. *Rate limit* 5 — caps per-IP submissions at 5/min
4. *Allowed origins* `https://your-domain.com` — rejects cross-site spam

5. Optional: *Reject disposable emails*, *Cloudflare Turnstile* for high-volume forms

Honeypot is *not a service*. No sign-up, no API key. Just a hidden field.

SPIN UP A LANDING PAGE

1. `g 7` · `c` · title it · `↵`
2. Settings tab — set the slug (e.g. `spring-launch`)
3. Builder tab — click a layout (1 col, 2 col…) on the left rail to add a section
4. Click module tiles (Hero, Heading, Button, Form embed…) to add them
5. Click any module on the canvas to edit it in the right rail (colors, alignment, content)
6. Status → **PUBLISHED** — page goes live at `/lp/<slug>`

FIND WHAT YOU WERE JUST WORKING ON

1. `⌘ K`
2. The "Today" group at the top shows records you visited in the last 24 hours
3. Click the one you want — or arrow + `↵`

PIN A RECORD FOR ONE-CLICK ACCESS LATER

1. Open the record
2. Press `p` — toast confirms "Pinned"
3. Next time, jump back with `1` – `9` (depending on its position)

Email tokens (substitutions)

Token	Replaced with
`{{contact.firstName}}`	Recipient's first name
`{{contact.lastName}}`	Recipient's last name
`{{contact.email}}`	Recipient's email
`{{contact.companyName}}`	Recipient's company
`{{unsubscribe_link}}`	Required in every send (compliance)

Landing-page module library

LAYOUT MODULES

- **Header / Nav** — brand + links + CTA
- **Hero** — full-width banner, heading, CTA
- **Feature list** — 2/3-col grid or list of cards
- **Social** — icon row (linkedin, twitter, etc.)

CONTENT + MEDIA

- **Heading** — H1 / H2 / H3 / H4
- **Text** — rich-text body
- **Button** — primary / secondary / ghost variants
- **Image** — width %, alignment, optional link
- **HTML** — raw escape hatch
- **Form embed** — drop in any published Form by ID
- **Divider · Spacer** — layout primitives

If something feels off

- **Hard-refresh** first: `⌘ ⇧ R` or `Ctrl ⇧ R`. The latest deploy may not have loaded.

- **Pinned items missing** — pinned/visited state is per-browser. Different device = empty.
- **Landing page not live** — Status must be PUBLISHED, slug must be set, URL is `/lp/<slug>` not `/landing-pages/`.
- **Email goes to spam** — DKIM / SPF on sender domain. Settings → Email sender domain.

For the full reference, see the **Marketing User Manual** (in `docs/`). In-app, press `?` on any marketing page for the live shortcut overlay.
